SUMMARY

Lead Data Engineer with 10+ years of experience building and operating distributed batch and streaming systems across mobility, location intelligence, adtech, and gaming. Hands-on with Python, SQL, Scala, Spark, Kafka, dbt Core, BigQuery, and AWS/GCP. Owns data products from ingestion and modeling through testing, deployment, and production support. Uses LLM-assisted development daily, with code review and automated validation of generated changes.

TECHNICAL SKILLS

Languages: Python, SQL, Scala, Java
Distributed processing: Apache Spark, Kafka, Apache Sedona; batch, streaming, geospatial pipelines
Warehouses and lakehouse: BigQuery, Databricks, Apache Iceberg, Parquet, Amazon Redshift
Cloud and orchestration: GCP (GCS, Dataproc); AWS (S3, EMR, Athena, Glue); Airflow
Modeling and reliability: dbt Core, data contracts, query optimization, CI/CD, TDD, DataHub, PagerDuty
AI-assisted engineering: LLM code generation and analysis, agentic workflows, review, automated tests

PROFESSIONAL EXPERIENCE

KABAM | Lead Data Engineer
Vancouver, BC — Apr 2025 - Oct 2026

- Migrated approximately 100 production models from Dataform to dbt Core on BigQuery in two months. Owned model design, testing, documentation, CI/CD, and Airflow orchestration.
- Reworked model dependencies, SQL query patterns, and the historical data lifecycle, cutting pipeline runtime from 2 hours to 13 minutes and historical storage costs by 50%.
- Designed an agentic automation architecture for data engineering. Use LLM-assisted development daily, with code review and automated tests to validate generated changes.
- Build a governed semantic layer with certified metrics and business definitions; align requirements with Analytics, Product, Finance, and game teams and mentor a Senior Data Engineer through design and code reviews.

SKIPTHEDISHES / JUST EAT TAKEAWAY | Senior Data Engineer
Canada (Remote) — May 2023 - Mar 2025

- Owned a near-real-time courier ETA data product using Kafka, Scala, and BigQuery, from requirements and design through deployment and validation, improving metric accuracy by 25%.
- Designed normalized data products in dbt Core and BigQuery. Added validation and quality controls that enabled retirement of 10% of duplicated or unused sources and reduced complex query runtimes from more than one hour to a few minutes.
- Introduced DataHub for metadata and lineage, with ownership and documentation patterns that helped users discover trusted datasets independently.

SD SOLUTIONS (NEURA / OTONOMO) | Big Data Engineer

Ukraine (Remote) Jun 2022 - Jan 2023

- Designed and operated large-scale geospatial pipelines using Scala, Python, Spark, and Apache Sedona on AWS EMR and S3, delivering EV-station intelligence to connected-vehicle products in North America and Europe.
- Refactored data cleansing and validation to improve performance and downstream quality; introduced EMR/EC2 cost attribution and controls that reduced cloud spending by approximately 10%.

ADTHENA (VIA 8ALLOCATE) | Data Engineer

London, UK (Remote) Feb 2021 - Jun 2022

- Built distributed ingestion and aggregation pipelines with Java, Scala, Python, Spark, and AWS, applying TDD and SOLID practices. Independently shipped a product-led growth solution in three weeks that supported acquisition of a major customer.
- Initiated the migration from Luigi to Airflow and introduced PagerDuty alerting for 24/7 monitoring, on-call response, and incident diagnosis.

APPSFLYER | Senior Data Engineer

Kyiv, Ukraine Jul 2019 - Jan 2021

- Owned Data Locker, a high-volume customer-facing export platform, delivering integrations, performance improvements, production fixes, and incident resolution using Scala, Python, Kafka, Spark, Airflow, Parquet, and S3. Worked within an ecosystem processing more than 90 billion events and approximately 200 TB daily.
- Built an S3 and GCS export integration for the company's largest customer and generalized GCS delivery into a reusable platform capability.

INTELLIAS (HERE TECHNOLOGIES) | Senior Scala/Java Developer

Europe / US (Remote) Feb 2017 - Jun 2019

- Built two map-assembly and release pipelines from the ground up for Audi and Volkswagen using Java, Scala, Python, AWS S3, and Jenkins.
- Migrated a legacy Java pipeline to distributed Spark/Scala and developed an authenticated Scala/Akka HTTP ingestion service using AWS SQS and S3.

CIKLUM (BESCIENCE) | Java Developer

Kyiv, Ukraine Sep 2016 - Jan 2017

- Developed duplicate ad-video detection using audio fingerprinting and perceptual hashing; decomposed a Java monolith into Spring Boot services and introduced MongoDB for transient processing state.

INFOPULSE (BICS) | Java Developer

Kyiv, Ukraine Jan 2015 - Aug 2016

- Developed Java/Spring/Hibernate services and an external partner integration for enterprise telecom procurement workflows, supporting business-critical partner data.

CERTIFICATION AND EDUCATION

Google Professional Data Engineer Dec 2024

M.Sc. and B.Sc., Economic Cybernetics - Kyiv National Economic University
2005 - 2010

ADDITIONAL EXPERIENCE

EY | Five years in audit and SOX controls; previously CISA-certified
Kamu Data Fabric | Open-Source Contributor | Jan 2024 - Present
